

Over the past few years, Google Chrome has become the default browser for a majority of internet users, and its standard-compliance means websites render on it exactly the way they are coded by their developers. But sometimes, a developer may come up with a somewhat quirky design that actually leaves the experience sub-par for end users. For instance, a few days back, I visited a website that had the least user-friendly scrollbar I had ever encountered, making page scrolling a pain. Though that's not say that the whole website needed a complete makeover, as the rest of the UI just looked fine. Looking for a solution, I came across **Rescroller** – a handy Google Chrome extension that allows users to quickly customize the scrollbar on websites the way they want.

Rescroller allows you to tweak and personalize the look of the scrollbar across all websites. The parameters you can change include color, shadow, border, hover effect etc. using GUI controls. If that's not enough, the extension also lets you have complete control over it by manually tweaking its CSS. This makes the extension suitable for both casual and power users alike. Lets find out how it works.

Rescroller

Settings

Welcome to Rescroller! Using the tools below, you can customize the look and feel of scrollbars across your Chrome browser. Please take a moment to style each scrollbar element and their properties, including the sizes and colors of shadows and borders. This extension will override scrollbars on all websites, including those that have their own customized scrollbars, unless you specify them in the blacklist below.

(Please note that, due to general restrictions for Chrome extensions, your scrollbars will not appear on the Chrome Webstore, or URLs that begin with "chrome://". However, you can enable Rescroller for local webpages and incognito browsing in Chrome's extension manager.)

The screenshot shows the 'General' settings tab for the Rescroller extension. It features a 'Scrollbar Size' slider set to 15px, a 'Restore Default Formatting' button, and a 'Blacklist' section with a text input field containing the example text 'mail.google.com, facebook.com'.

When it comes to scrollbar customization, Rescroller is the only Chrome extension that allows you to completely customize the look and feel of your scrollbars. It's a powerful tool that gives you full control over the appearance of your browser's scrollbars, allowing you to make them look exactly the way you want them to. Whether you prefer a classic, minimalist look or a more modern, colorful design, Rescroller has you covered. The settings are easy to use and intuitive, making it a breeze to adjust the scrollbar size, colors, and shadows to match your personal preferences. Plus, the blacklist feature lets you exclude specific websites from the extension's styling, ensuring that you can still enjoy the default look of those sites if you prefer. Rescroller is a must-have for anyone who wants to take their browser's appearance to the next level.
