

Duplicate content on your website can hurt your website's [Google](#) ranking, and can be a serious issue with respect to copyright violations as well.

Duplicate Content

is a

[web](#)

[app](#)

that can help you detect similar content on two web pages. It is especially useful for web developers and bloggers who are interested in seeing similarity between two sites. It is a simple, online service that lets you check the extent of duplicity between two webpages by comparing the

[text](#)

as well as the

[HTML](#)

markup of both pages, and shows a comparison between the HTML, standard and smart text.

You can also embed the duplicate checking code on your own website from the said web app.

Details after the break.

Duplicate Content is completely free and doesn't require you to input any information other than the target URLs. Hit the *Check* button to see results.
