

If you are a software developer and use multiple tools for testing and validating your code, then **Online-Toolz**

can be of great help. It's a web service that provides software developers with a whole lot of validators, functions, generators and conversion tools. It offers

[HTML](#)

,  
[XML](#)

validators, text conversion & encryption-decryption functions, date functions, password generators, color chooser and more.

Online Toolz has a tools menu at left side. Starting with some [encryption](#) tools, it provides users with [MD5](#) and SHA1 generators. MD5 uses the *Message-Digest algorithm 5*, whereas SHA1 uses, the SHA algorithm.

# Character Manipulation Functions

This tool provides all information about a specified **character**

## Input Character

Get Character Information

## Character Information

<b>Character Dec Code:</b>	<input type="text" value="85"/>
