

Find and Run Robot aka **FARR** is an a lightening fast file search utility, which locates any kind of file, application and folder by matching initials of a typed keyword. Find and Run Robot arguably locates items quicker than [Windows Search](#) , and provides the option to customize search paths, comes with fast incremental searches, and memorized search history to help users quickly find files. FARR can be accessed via a simple keyboard shortcut to quickly look up files and folders. Other than being a highly customizable application, FARR can also be extended with the help of plugins. There are many extensions available for FARR that can be used to add a range options to it, including browser support.

Once launched, FARR sits in the system tray, from where you can bring up its interface by clicking the system tray icon or via *ALT+Space* hotkey (which will need to be enabled from application options). To find any file or folder, simply type the name of the required item and FARR will display relevant results. You can either launch an item by clicking its name, or by selecting a number assigned to it (by *FARR*).
