

If you've been an Instagram or Vine user for a while, you must know that frustrating moment when while browsing your feed on the respective service's mobile app, you came across a video or picture that you wanted to save, but couldn't do so because of the lack of any such option. We have already covered methods for [saving Instagram videos on PC](#) and [downloading Vine videos on iPhone](#)

, but if you primarily use Android for all your Vine and Instagram browsing and want to be able to download your favorite images and videos right to your device for later viewing or manual sharing, you're in luck, as long as you have a rooted device. XDA Senior Member

MohammadAG

has released two Xposed framework titled

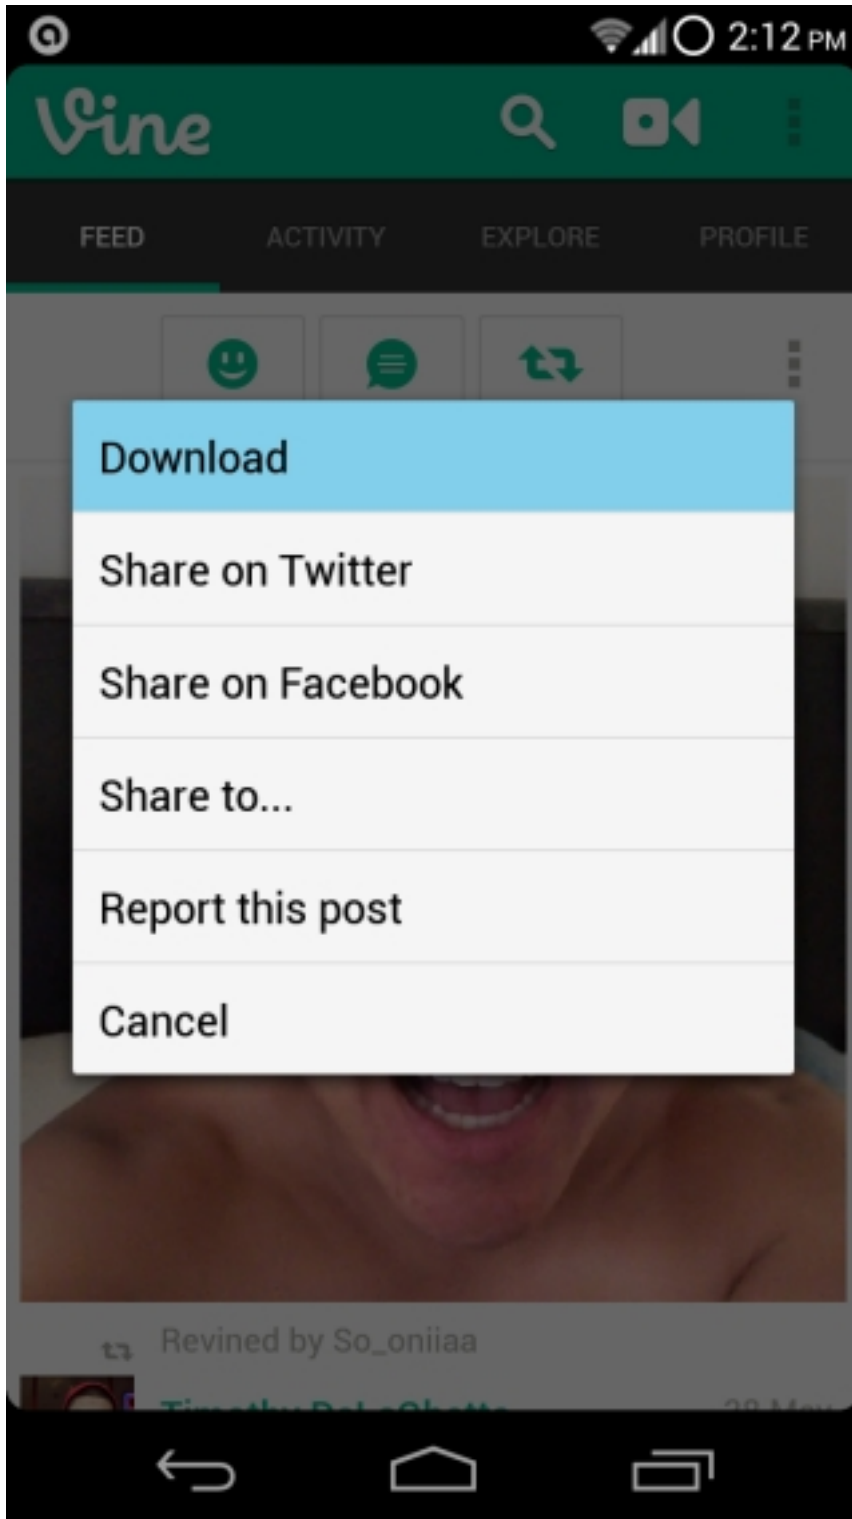

Vine Downloader

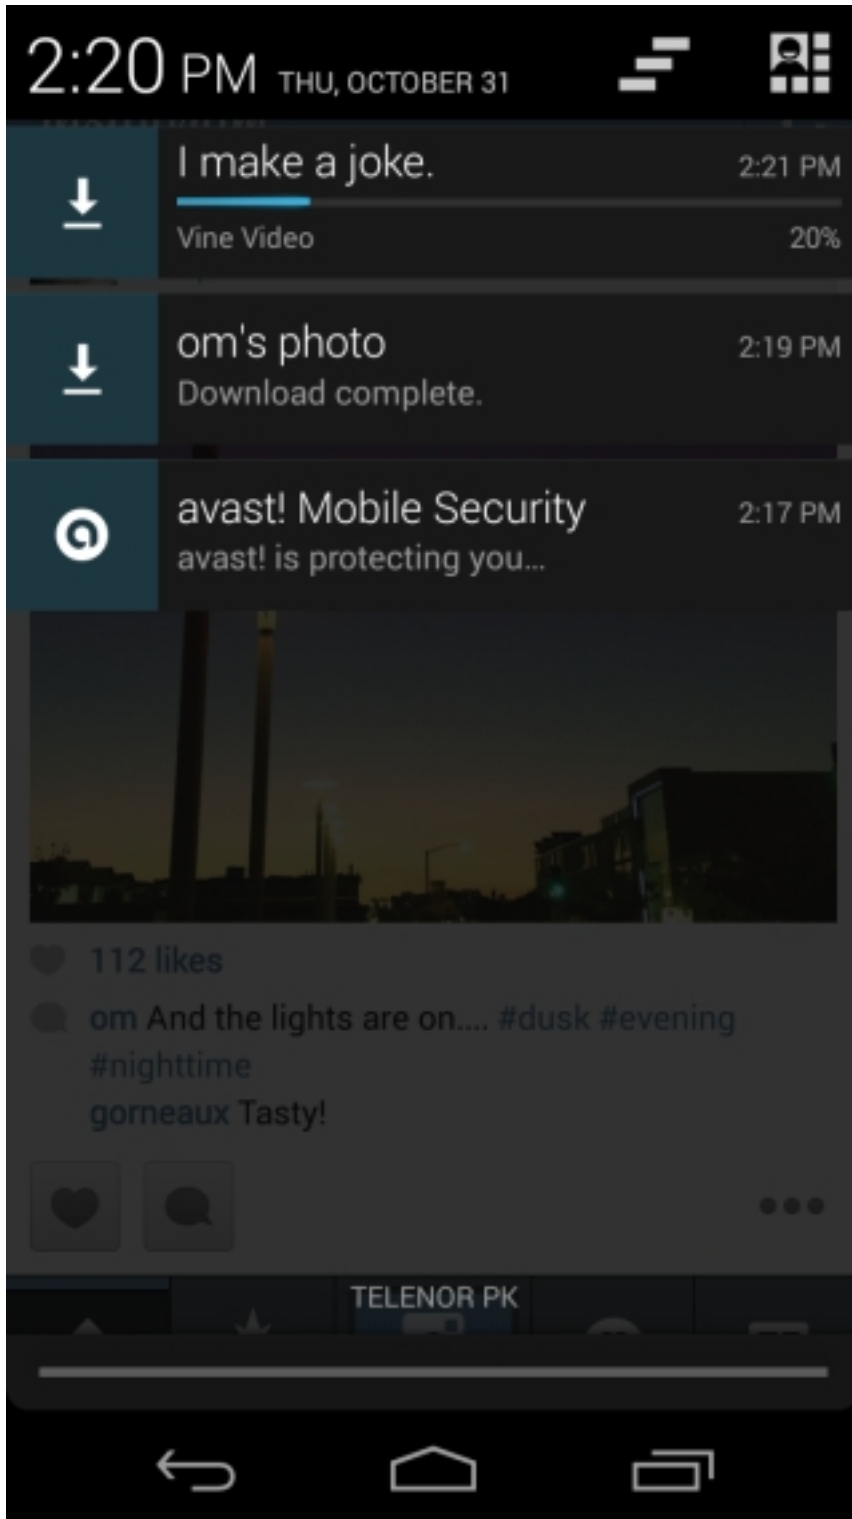

and

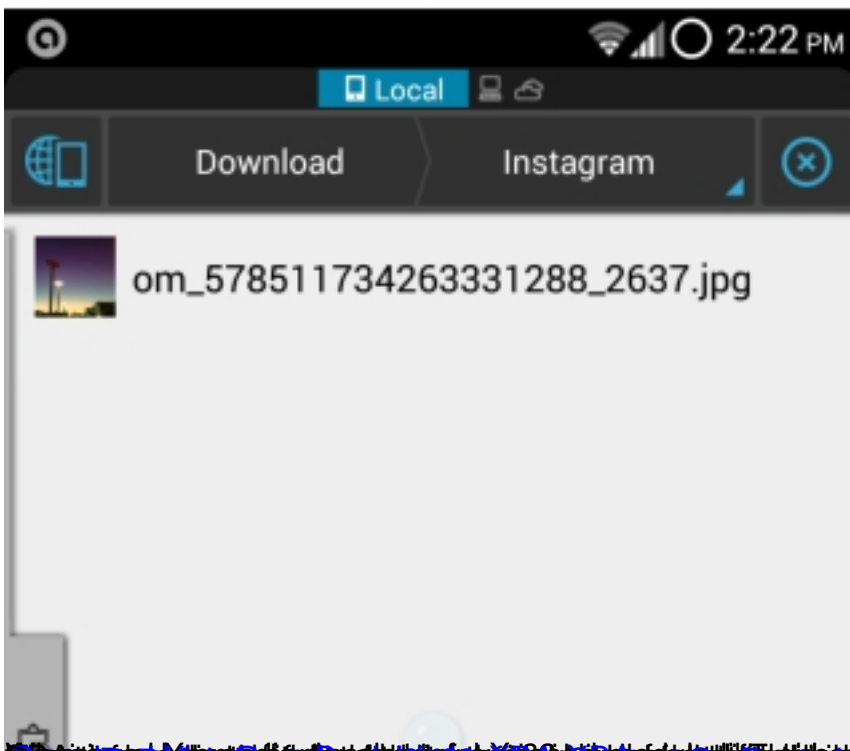

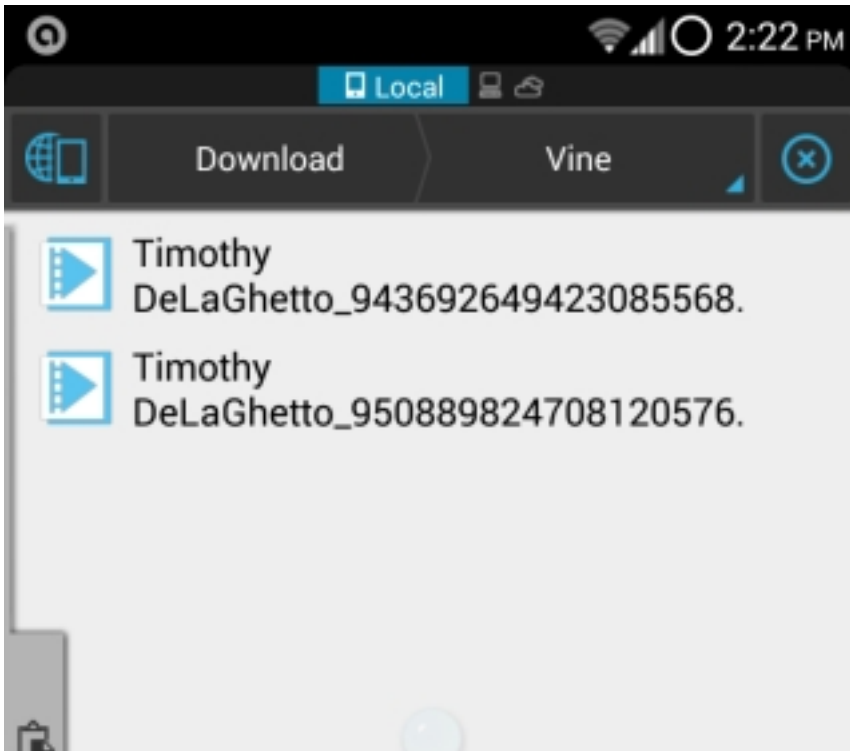

Instagram Downloader

that let you easily download content from both these popular video and image sharing networks with ease.

As mentioned above, both these apps are modules for the excellent Xposed framework, and you'll need to have it installed and running on your device, which in itself requires a rooted device. Don't fret though; we have you covered in our guide to [using the Xposed framework and installing its modules](#). Next, install both these modules from the Downloads section of the Xposed Installer app, and you'll be able to find the new Download option in the menu for all posts in the official Vine and Instagram apps.
