

Ever came across the need to copy all the links present on any particular web page, be it as a part of some research, or to get direct access to some content embedded in the page in a manner that doesn't let you get to its link via the normal context menu method? How about wanting to copy just the download links from the page? If you use Mozilla Firefox, there's a handy add-on by the name of **Copy All Links** that can get the job done in the simplest manner possible. As the name suggests, the add-on can copy all the links present on a web page to your clipboard. In addition to copying all links arbitrarily, you can also choose to copy only the download links, or make a selection on the page and then copy all or just download links from the selection only. More info after the jump.

Copy All Links is a tiny extension that does one job and does it well. Upon installation, it adds its entry as a submenu in the default context menu for web pages in Firefox. Just right-click anywhere on the page, and you will be able to copy all links or just the download links that are present on the page from the 'Copy All Links' submenu. If you make a selection on the page prior to right-clicking, you will also see 'All Links in Selection' and 'Download Links in Selection' options in the submenu, allowing you to copy the links from the selected content only.

On the left, the copy all links option is being targeted by the mouse. Also on the left, the links are highlighted in the
