

Google Play Store allows you to install any app to your Android device by clicking the 'Install' button located on the app's web-based Play Store page. But if you want to download it to your PC as an APK file, you're out of luck because Google does not (and may never) offer such a feature officially. A while ago, we covered a [Chrome extension](#) that allowed you to download APKs to your computer from Android Market. However, that extension doesn't work anymore with the Play Store. On the flip side, we now have an even simpler solution in the form of **APK Downloader**,

a new web-based service that enables downloading APK from the Play Store directly to your PC. For anyone who wants to grab APKs of free apps not available in their region or for the devices that they have configured with their Google account, this is a breath of fresh air as it eliminates the frustration of searching the web for those APK files.

Little effort is required from your side to grab the APK file from Google Play Store using APK Downloader, as the tool works all the magic on its own. The landing page of the service comprises of a barebones design, which is both simple and intuitive.
