

Ever since the introduction of Unity, the most tricky part of managing Unity-based options has been its customization. Previously, we brought you the [Unity Launcher Editor](#) and the [Unity plugin](#)

for

Compiz Config Settings Manager

. Recently, a new tool was released for customizing Unity settings in

[Ubuntu](#)

11.10, known as

MyUnity

. This tool provides full customization of Unity features, including the Unity Launcher, Dash, Panel, Desk and Font. MyUnity is a complete customization package for Unity users, and is far more comprehensive than other applications like

[Unity 2-D Settings](#)

, which are no longer compatible with Ubuntu 11.10. Details after the break.

You can install MyUnity in Ubuntu 11.10 and 11.04 by entering these *Terminal* commands:

```
sudo add-apt-repository ppa:myunity/ppa sudo apt-get update sudo apt-get install myunity
```

Once installed, you can launch MyUnity from Dash, and start customizing Unity settings. The *La*

uncher

tab enables changing the size of the Unity Launcher icon size, its transparency, behavior, display and backlight, whereas the

Panel

tab makes it possible to tweak Unity transparency by keeping it active, half, optimal or disabled.

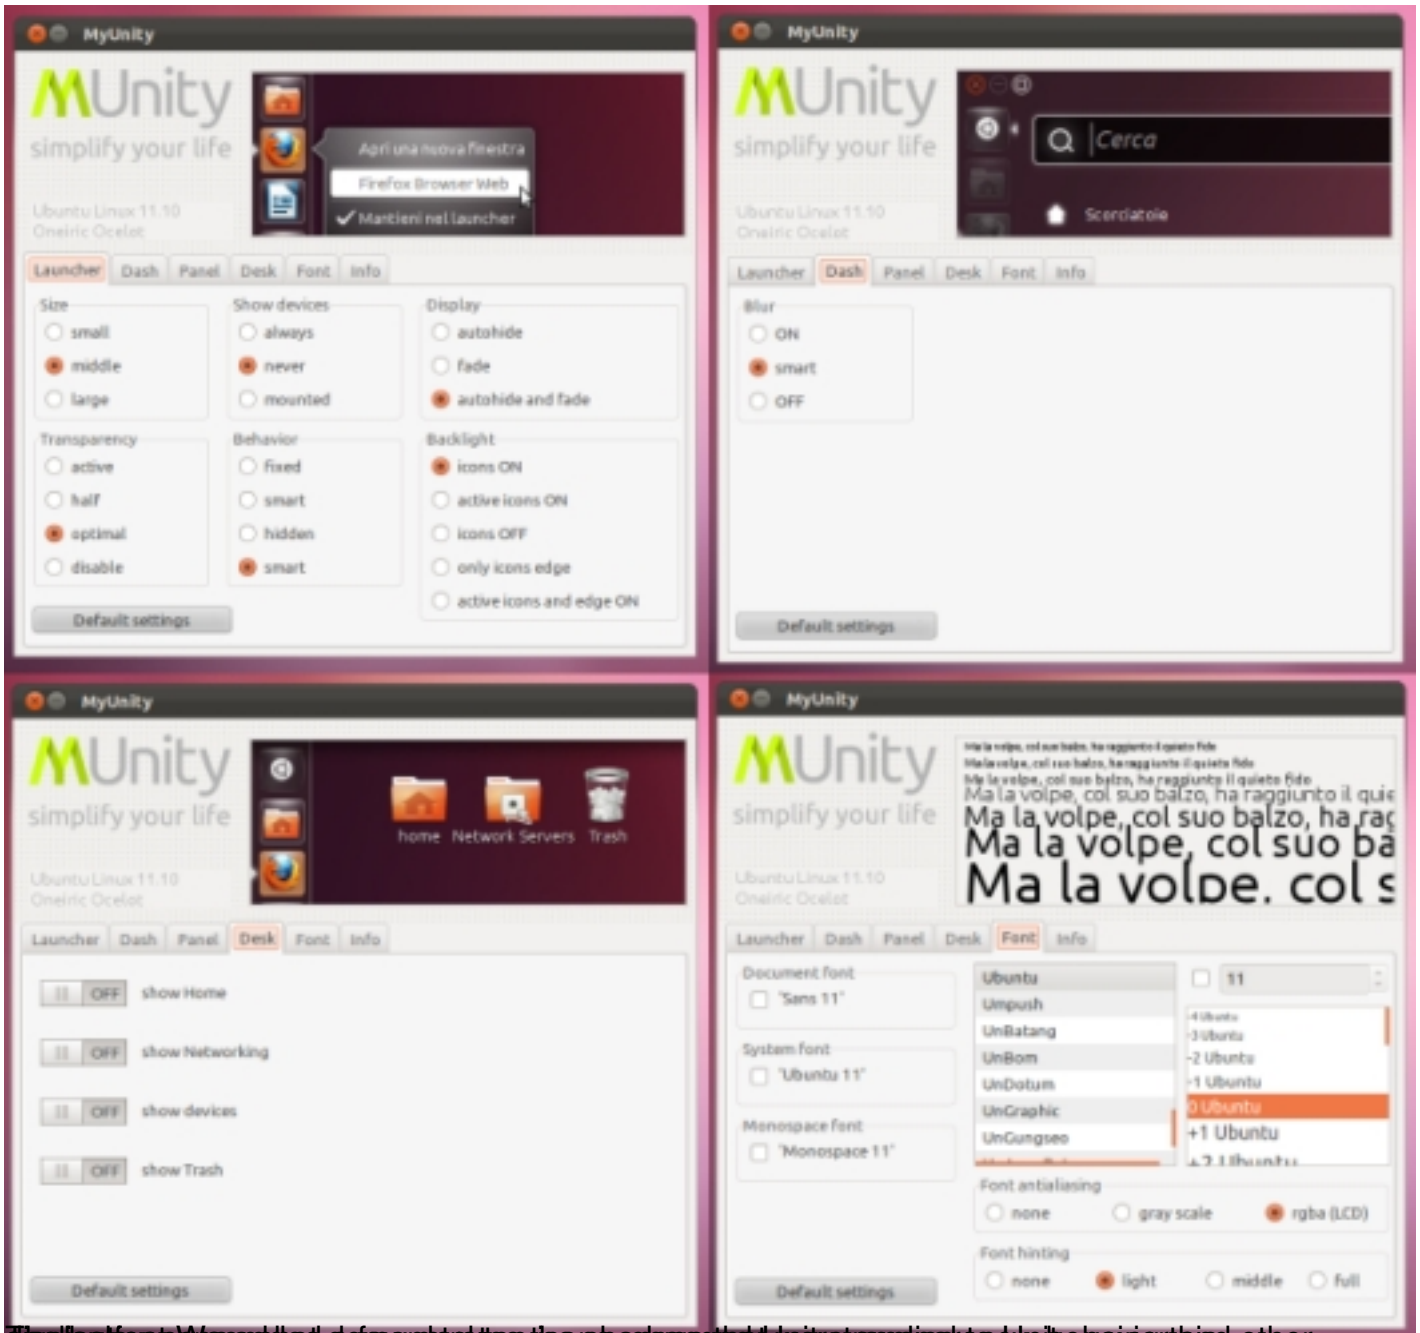

The

Desk

tab can be used to adds some basic icons to the desktop (including home, networking, devices and trash). You can change the Unity font size, format (for document, system and monospace) and set font antialiasing and hinting from the

Font

tab.

application. We added a few desktop icons, changed Unity's appearance, and being this other
