

If English is not your native language and you find some foreign language words as you browse the web, or if you're in the process of learning a new language, then **Auto Selective Translator** could be a really handy tool for you. This Chrome extension switches uncommon words/phrases from English to a language of your choice, and automatically displays inline translations, letting you quickly learn and understand new words. Translated words appear in tiny boxes over the original ones, allowing you to read with consistency without having to navigate away from the page. Moreover, you can choose how much of the page is translated, and the number of translated words can be customized from the extension's settings.

After you've added the extension to Chrome, click the button in the toolbar, and Auto Selective Translator will automatically translate uncommon words to your desired language. Translated words will appear over the original ones, which will allow you to have a deeper understanding.

For more information on translating, also visit [Google Translate](#) and take a look at the other Chrome extensions [we've](#)
