

RTMP (Real Time Messaging Protocol) is a protocol for streaming audio, video and data over the internet. It takes the data from the server streaming the content, and sends it to the user's computer running a flash player in the browser. Websites like YouTube use the normal HTTP streaming, while other websites, such as Hulu and Twitch.tv, use RTMP for streaming videos to the users. RTMP is different from HTTP in the sense that while HTTP streaming is done in a way that you put your file on an HTTP server, and any user can download and watch it, using RTMP for streaming, people can watch videos at the same time that they are being recorded. Another advantage of RTMP over HTTP is that it is much harder to steal or download a video over RTMP than over the regular HTTP stream. This is the reason why RTMP is one of the most famous protocols being used nowadays to provide protected content for the users. It is not possible to download videos from a website with RTMP streaming using regular programs that would otherwise grab videos from YouTube and the lot, such as Real Downloader and Orbit Downloader. If you are looking for an application that allows you to download RTMP streams, check out **RTMPDumpHelper**. Read on to find out how to download RTMP videos using RTMPDumpHelper.

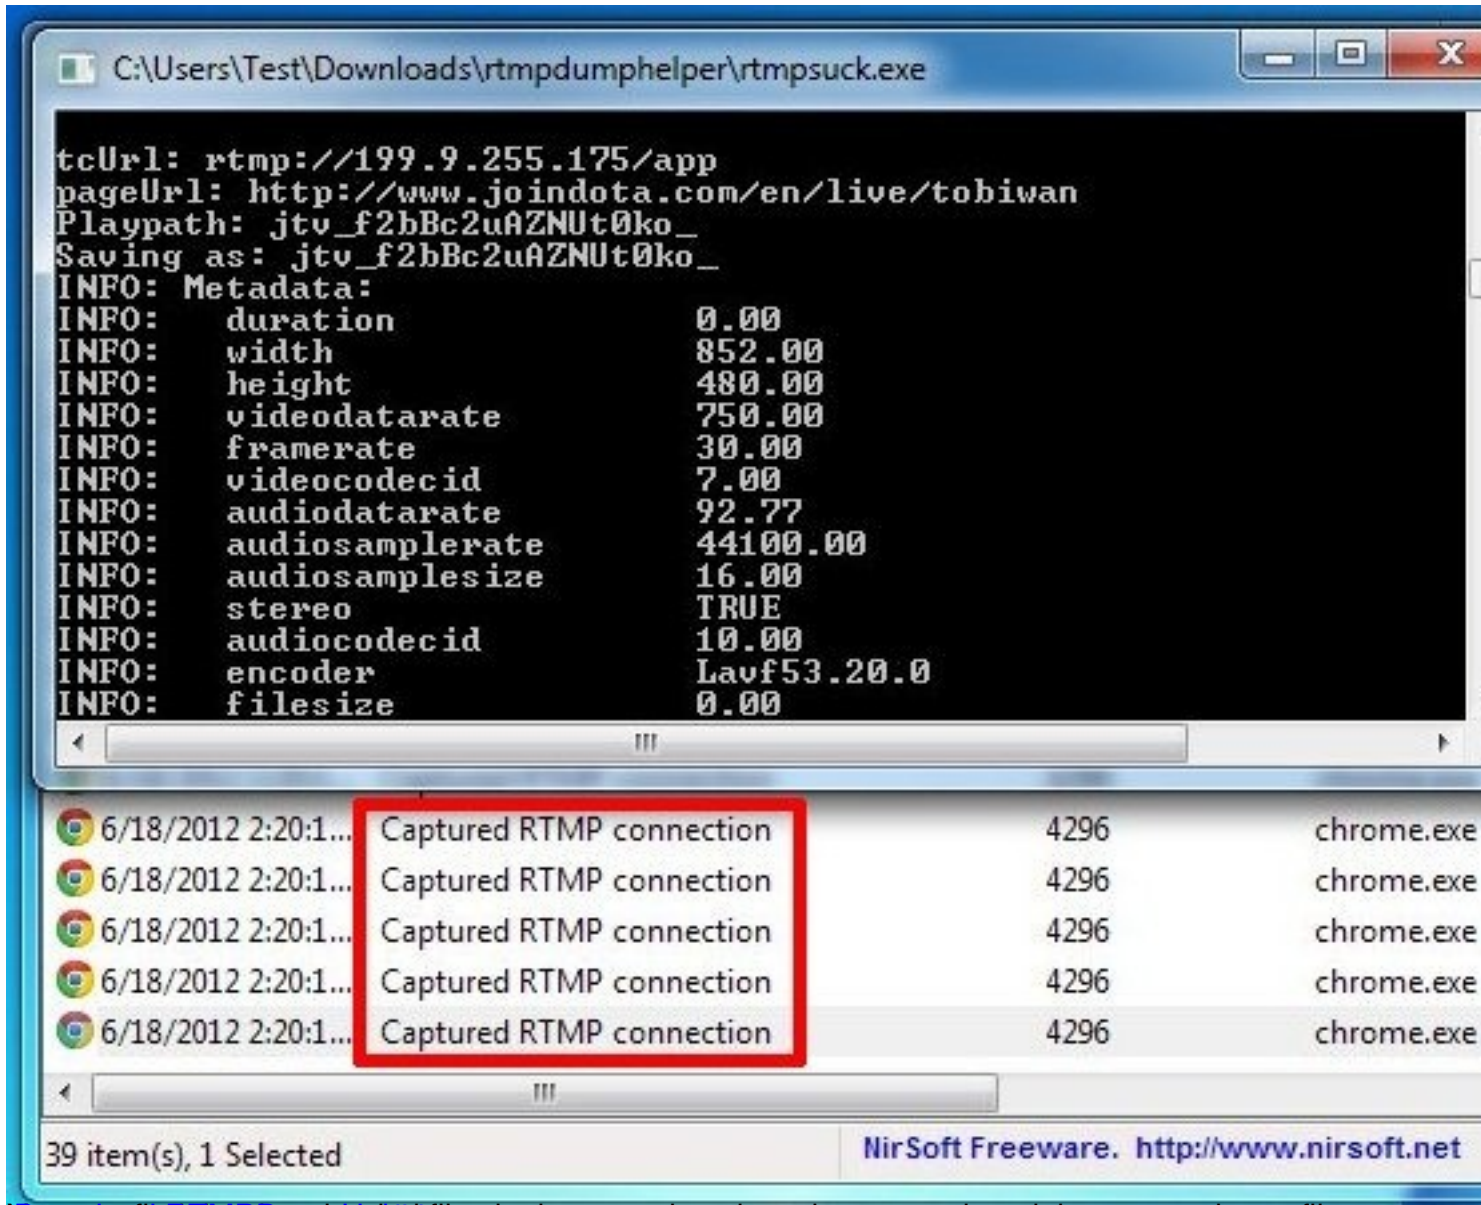

RTMPDumbHelper is a tool by NirSoft that allows users to download RTMP streams with a user-friendly GUI.

First, download the RTMPDumpHelper (download link provided below) and extract it in a folder. Then, download the Windows build of RTMPDump toolkit (download link provided below) and extract it. Now, copy the rtmpsuck.exe in the same folder that you extract RTMPDumpHelper in. Next, run the RTMPDumpHelper.exe, and you will be asked to allow the firewall to let the program communicate. This will execute both the RTMPDumpHelper.exe and rtmpsuck.exe at the same time.

The main interface of RTMPDumpHelper.exe has Action Time, Action, Process ID, Process Name Process Path and Error columns, while the rtmpsuck.exe has a command line interface.

Download RTMP Flash Video Streams Using RTMPDumpHelper For Windows

You can find the [RTMPDumpHelper](#) file (3) in the same Windows build where you placed the rtmpsuck.exe file.
