

Bookmarks can be of a great use for not only saving web links to check later, but also to have quick access to frequented websites through the Bookmark Toolbar. Almost all browsers come with some sort of bookmarking facility - some more comprehensive than others. However, what most of these offer by default is bookmarking, sorting and categorizing at best, but that's pretty much it. To gain better control over your bookmarks, you may want to check out **Bookmarks Permissions**

It is a security add-on for Firefox that allows you to set specific permissions for individual bookmarks, which override global permissions. The add-on gives you the ability to enable or disable certain aspects of a website, like images, pop-up windows etc, to make your browsing experience smooth. Blocking specific items can also help you navigate to your favorites faster.

The add-on requires restarting the on-going Firefox browsing session in order to complete installation. However, after that, you are ready to take command of your bookmarks. You can bookmark any webpage easily utilizing the keyboard shortcut '*Ctrl+D*', and then you can define specific settings by going to

Bookmark Properties

of each starred item, or by viewing the Bookmark Manager
(*Ctrl+Shift+B*)

The following five permissions can be set individually for every bookmark: *Images, Redirect, Plug-ins, Javascript*

and

Frames

. For each of these, you get three standard options,

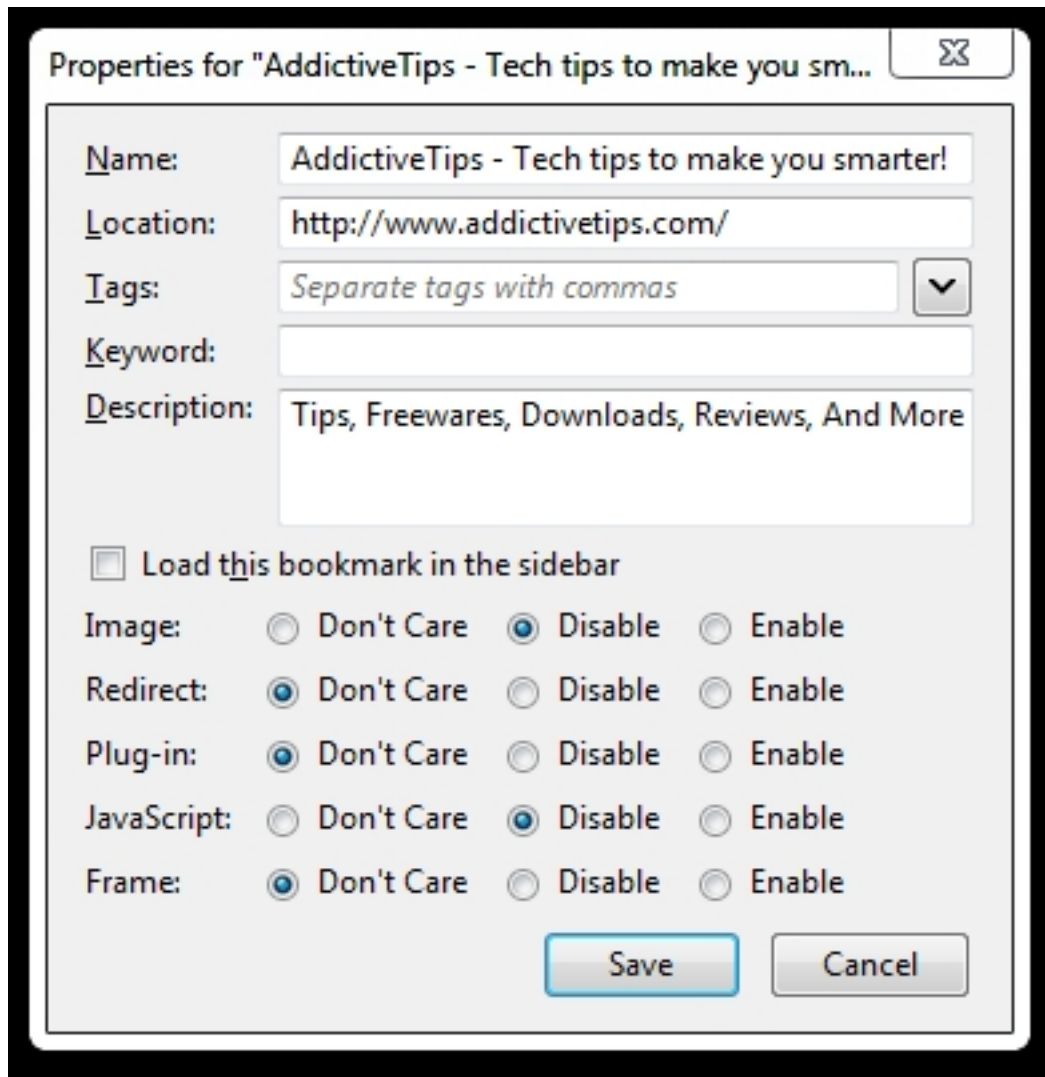

Don't Care, Disable

and

Enable

Don't Care

is the default setting for each bookmark, which simply means that the global permission is being used.

Open IT Online Integrates Popular Document & Image Viewers & Editors With Your Browser

Have you ever had one of those instances where you really needed to open a Word document, but didn't want to fire up Microsoft Office and waste precious system resources? Or did you experience events when you wanted to edit an image but had no desire to install Photoshop or any specific software? **Open IT Online**, an extension/add-on for all major browsers, does it all for you! This utility enables you to open and edit your files in the browser window, as opposed to downloading the file and opening it via an external

application. Open IT Online Lite integrates Google Docs Viewer, Zoho, View Docs Online and Vuzit for documents, and Pldr, Sumo Paint, Picnik and Snipshot for images. You no longer need to have any software installed to view and edit documents, spreadsheets, presentations etc, or to edit any image.
