

QuickTime player, Mac's native video viewing and editing app, does everything except supporting Flash (obviously) and creating playlists. For some reason, this otherwise feature-rich and sophisticated app doesn't let you create playlists, and there is no work around to it, at least natively. If you want to create playlists for movies, you will have to forget about viewing them in QuickTime and use iTunes instead. One alternative, although a limited one, is to use **Playlist Lite**

, a free Mac app that lets you create playlists for QuickTime and for iTunes. Although for iTunes, you don't really need an app like this, but Playlist Lite nevertheless aggregates from iTunes as well. The functionality is pretty straight forward, and as the name suggests, this is a "lite" version, hence limiting the number of items you can add to a playlist to 10. While this is indeed restricting, it appears that the

Upgrade

option won't work either, and you are left with just the limited version. The app itself is only 2 days old at the time of writing, so, it's probably just a bug that will (hopefully) be fixed soon, and allow users to upgrade.

Download, install and launch Playlist Lite. The interface is divided into two panels, with the top panel being small and resembling the player controls you see in iTunes. There are some subtle differences though, like the shuffle and loop buttons being at the bottom of the app window as opposed to on the player itself. The second panel consists of two collapsible lists; the *Playlists* area is empty and all playlists you create for QuickTime are listed under it, while the second list is marked by the iTunes icon, and expanding it will reveal all playlists that you've created in iTunes.

Always use a reliable anti-virus program to protect your Mac. You can find more information about this and other topics at www.mactech.com.

Play 10 items with iTunes on a Mac. This is a great feature, especially if you have a large collection of music. You can also create playlists with up to 10 items per list. This is a great feature for organizing your music collection. You can also create playlists with up to 10 items per list. This is a great feature for organizing your music collection.
