

Glued to the news-strip of your favorite business channel or website? Monitoring multiple trading clocks closely for better analysis and decision-making? Praying that you are the first one to chase the stocks as soon as the market opens? All of these needs are addressed by an application that is bound to transform your life as a stock market trader for the better. **TraderClock**

integrates multiple markets with their start and end times on a single stylish clock that easily finds its place on your desktop. With automatic notifications informing you whenever a market of your interest opens or closes, this powerful utility enables you to follow intricate details of the global stock market from the comfort of your desktop. Upon hovering your cursor on the clock, all relevant details including the current stock index along with percentage change and graphical trends come to view.

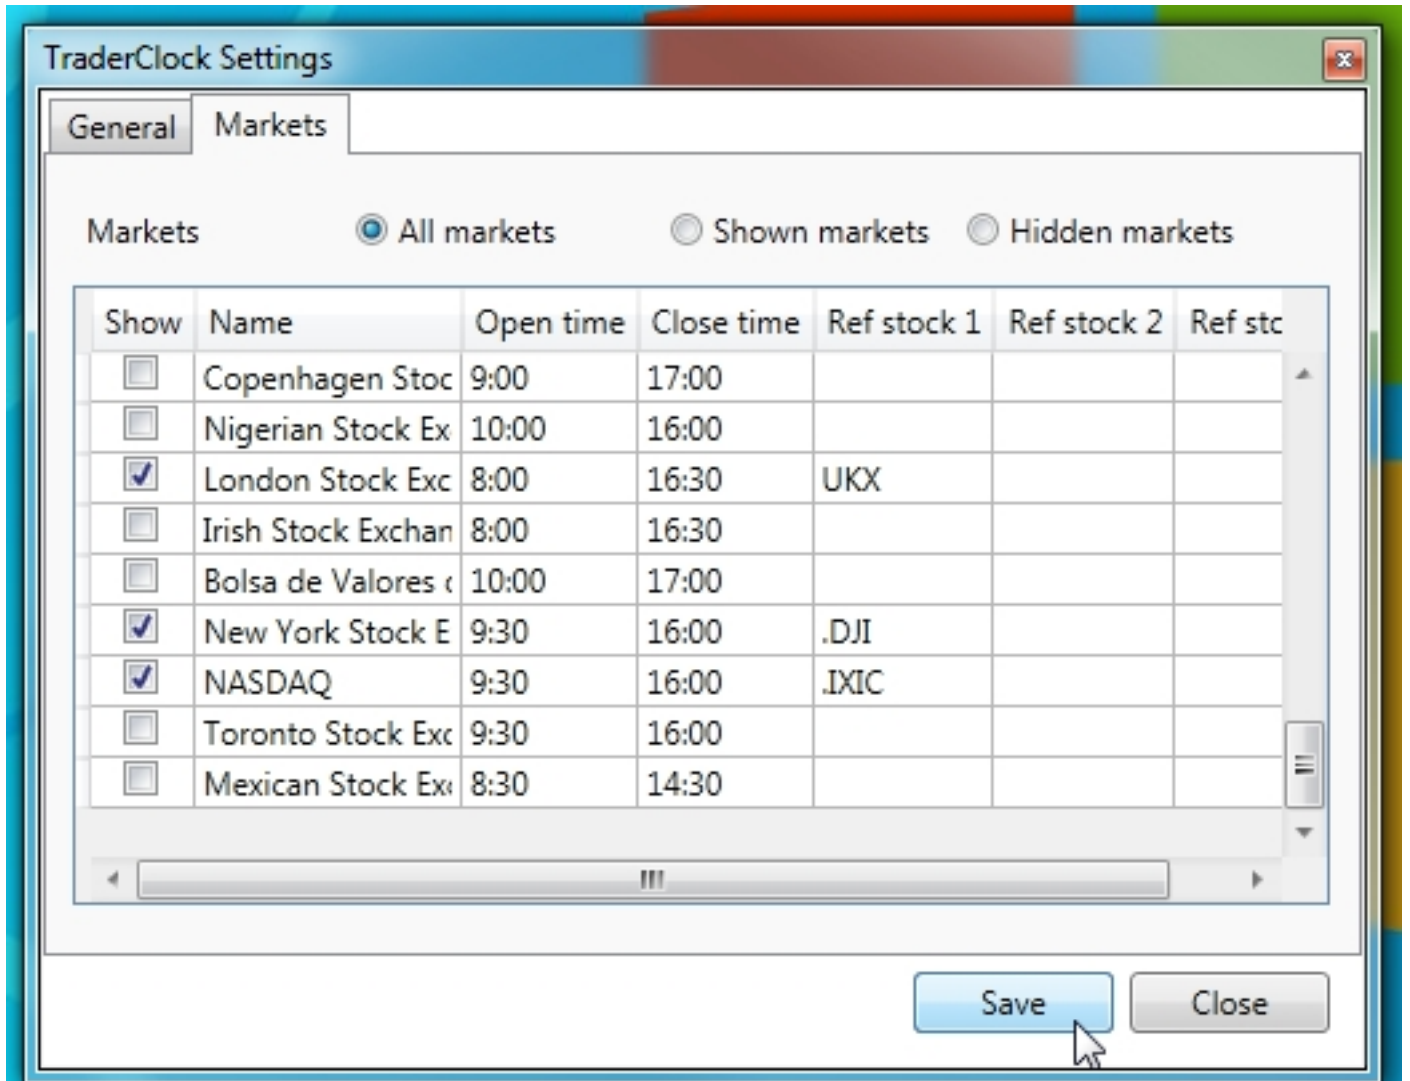

Once you understand the basics of this application, interpreting and monitoring various stock markets becomes very simple. The rings on the clock represent a stock market each with the initiating point showing the start time while the end point represents the closing time of the respective market. All rings are read clockwise, while the clock hands show your home time. Green color tells you that a market is open and active while the white color implies otherwise.

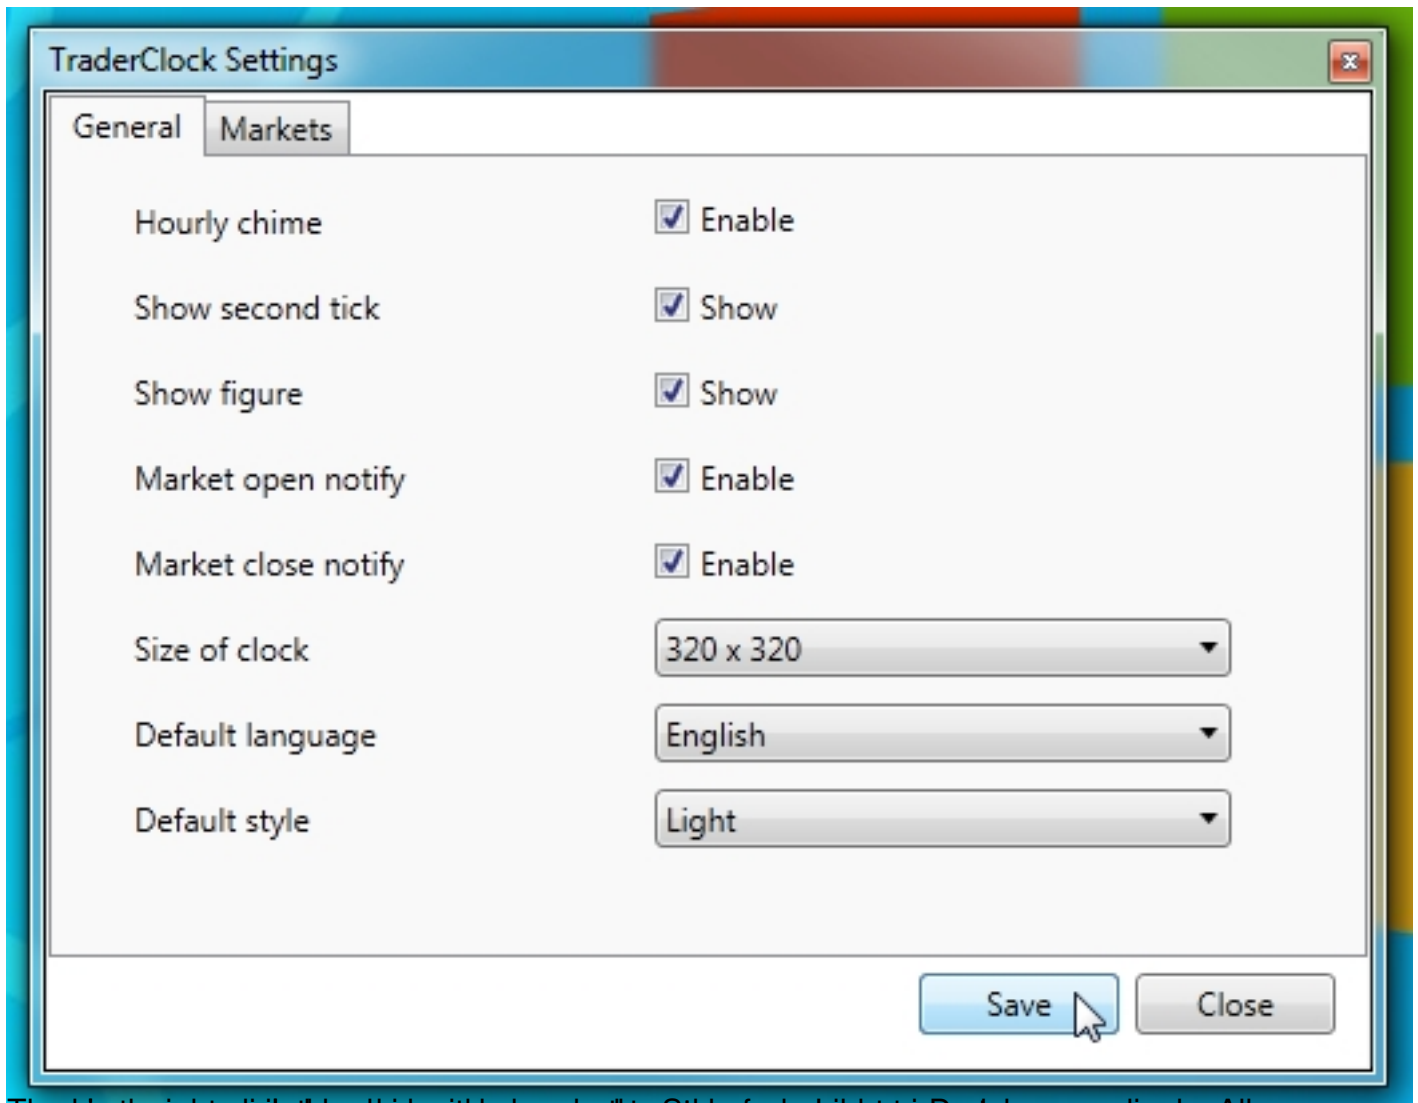

percentage change with a red arrow indicating a decrease in value. The tooltip also displays the index's current value and the percentage change.

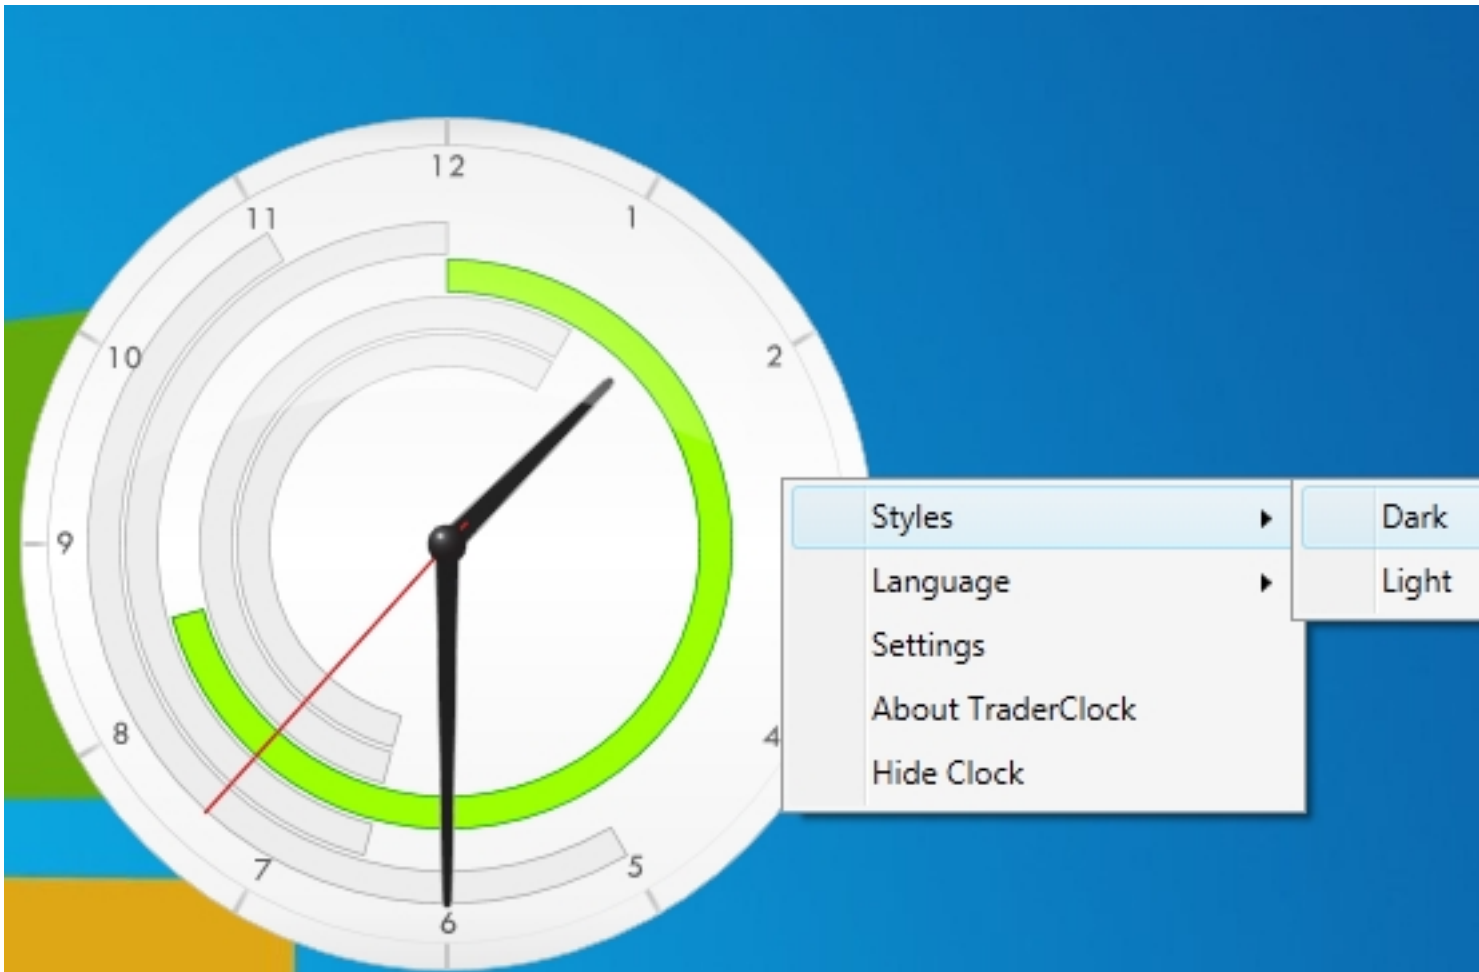

Along with the clock, the application also includes a list of stock exchanges and a search function. The TraderClock software is available for free download from the website www.traderclock.com.

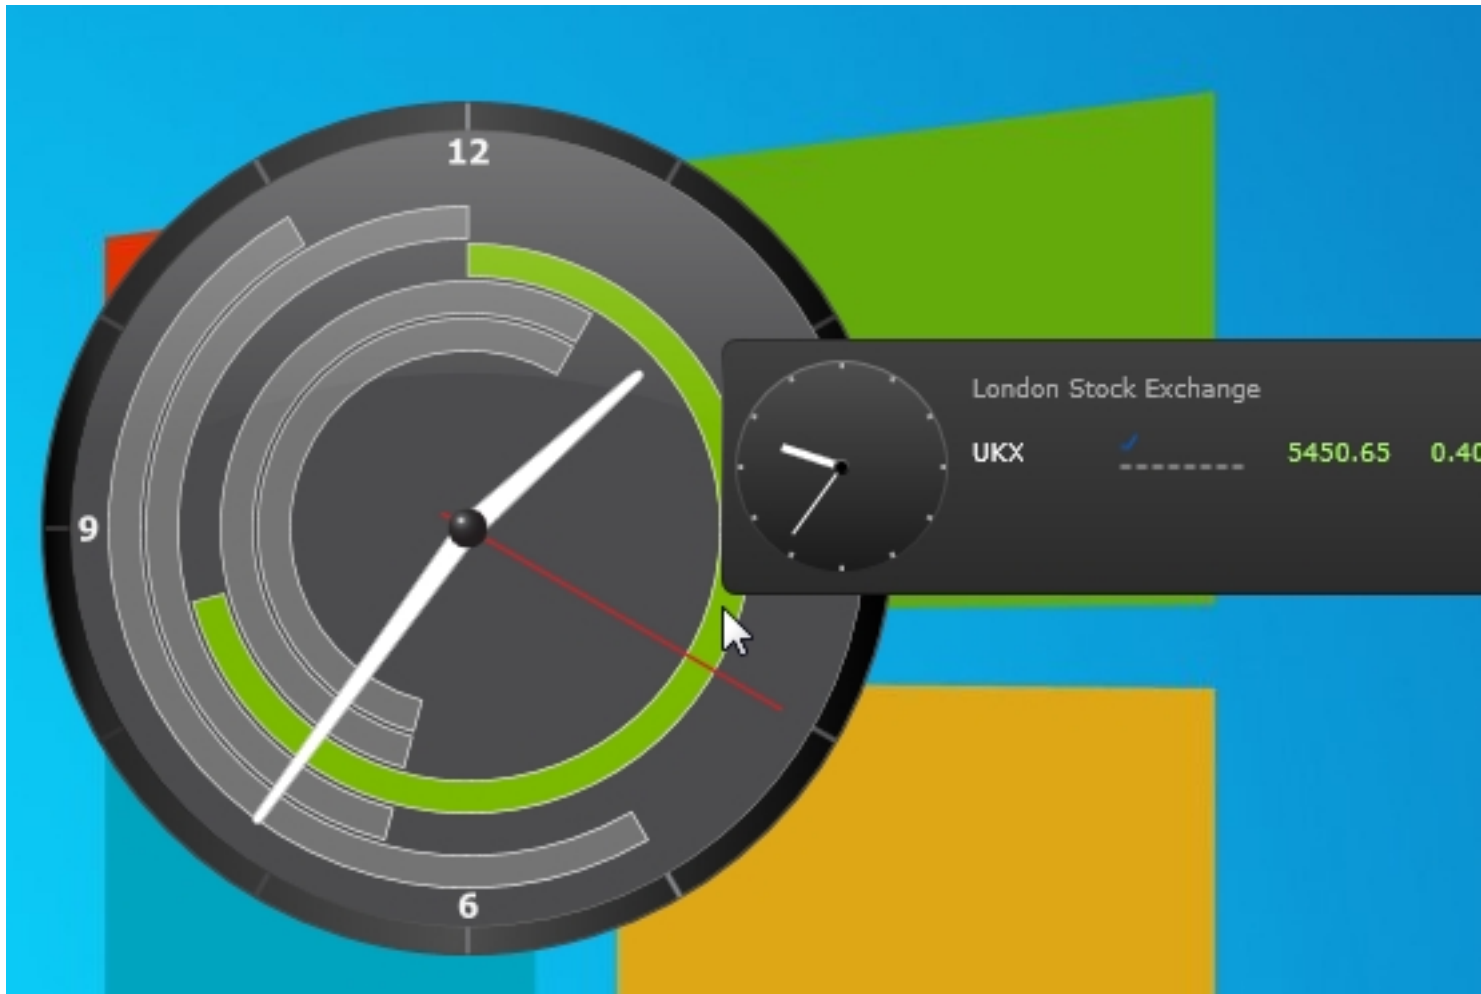

The General settings tab enables you to modify the user interface with emphasis on
