

Even though Windows allows you to connect and use more than one monitor at a time with your system, there are no extended options for controlling the dual monitor setup; for instance, applying a different wallpaper on each, changing the primary monitor through a shortcut, mouse cursor wrapping, switching applications between monitors, launch applications on a specified monitor etc. If you want to switch between primary monitors, you have to open the Personalization dialog box and go to the Adjust Resolution option to make the selected monitor your main display. To save you from all that trouble, some days ago we covered a tip on [how to quickly change the primary monitor using a hotkey](#)

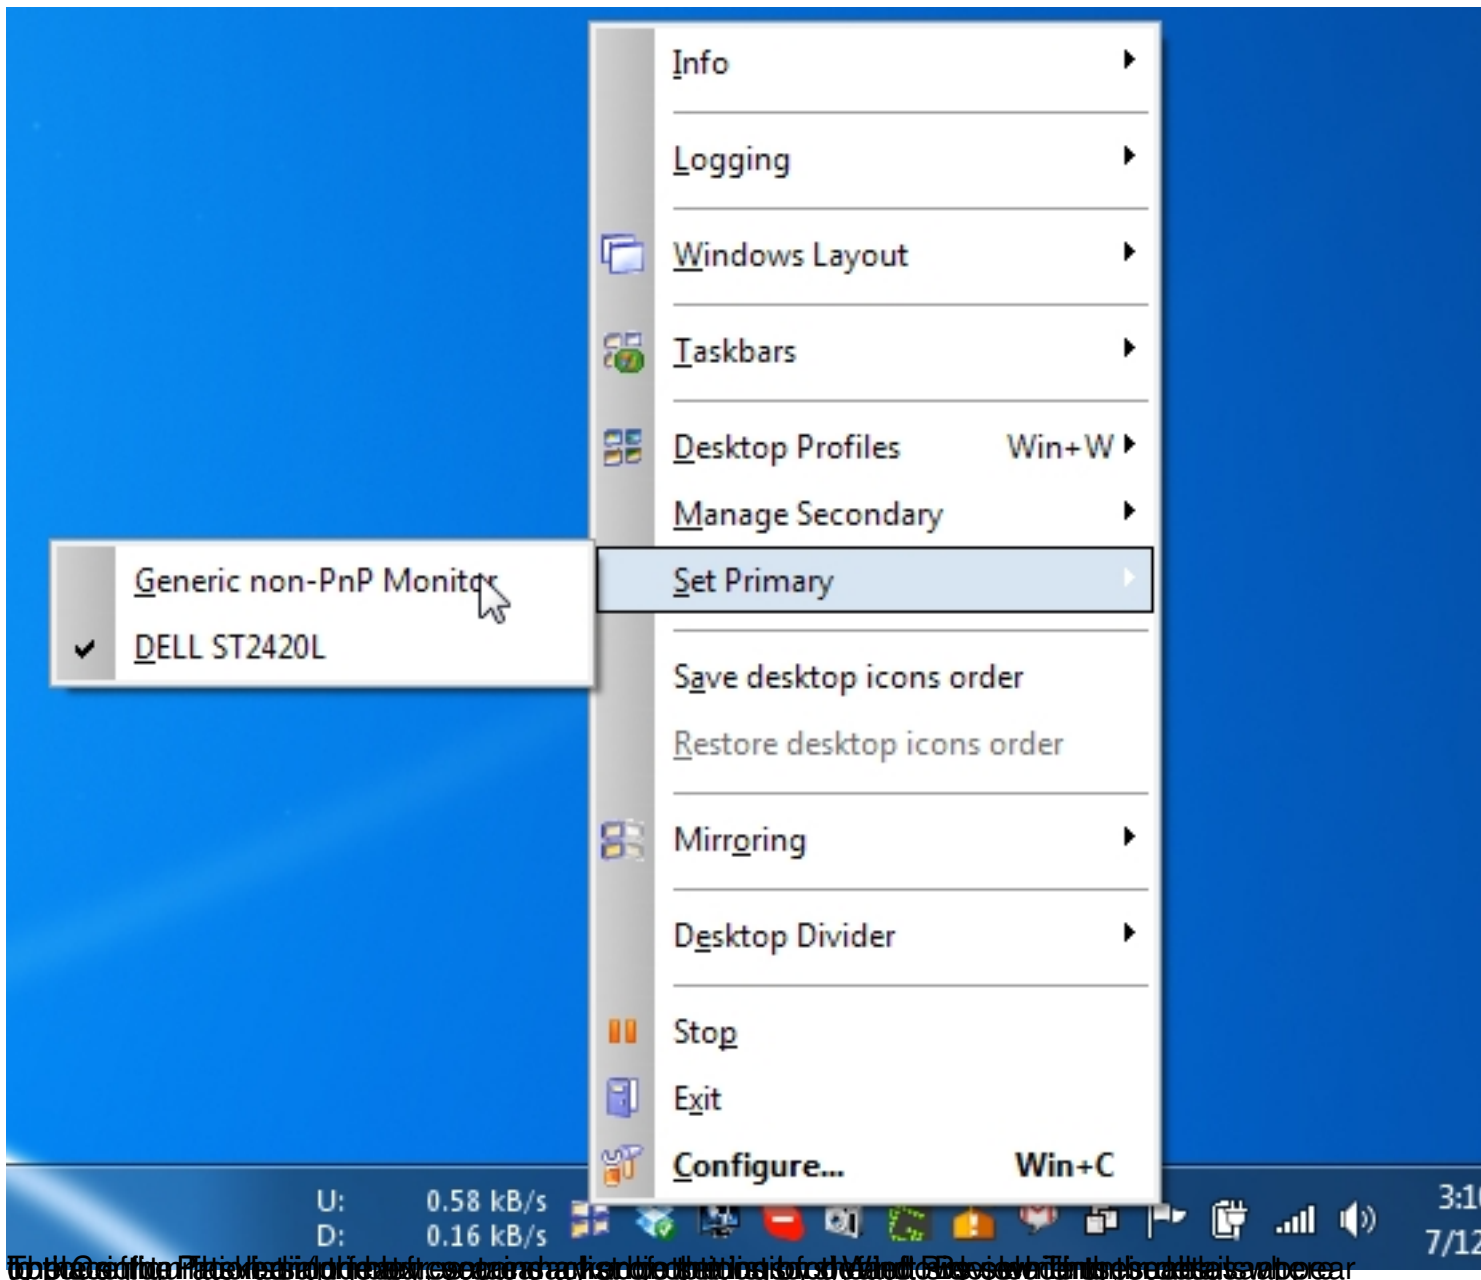

. However, a shortcut to change the primary monitor lets you control just one aspect of a dual monitor setup. If you are looking for a comprehensive tool that enables you to control different elements, such as the wallpaper, screensaver, taskbar, monitor layout, mouse and keyboard shortcuts and a lot more, give

Actual Multiple Monitors

a try. It is an application for Windows that provides you with options to control all the aforementioned, an a lot more elements of a multi-display setup, all from a unified interface.

The program is available in both free and paid variants; however, after installation, users can enjoy the full features offered by Actual Multiple Monitors for 30 days. Upon the completion of this time period, the application goes into free mode and all the Pro version features are automatically blocked. In this review, we will be highlighting only the free features offered by the software.

The program runs in the system tray and clicking it reveals some quick toggles, as well as the Configure option to access the settings console.
