

Although the habit of keeping journals has gone somewhat out of fashion in recent times, you can't deny the benefits and positives that diary-writing can bring to life. Even if you don't plan to publish your memoirs one day, they can still prove to be an absorbing read for your loved ones, and you can also use them as letters to your future self. Having said that, it is no mean feat to maintain a proper paper diary in today's fast-paced life. Fortunately, that's where smartphones can prove to be your best friends. **Moments** is a WP7 app that you can use to create short entries to record your moods and thoughts at any particular point in time. The best thing about the app, apart from its beautiful interface, is the fact that it really makes your journal everlasting, and backs everything up to the cloud.
