

Although many people might be under the impression that due to its integration with SkyDrive, Windows Phone is not a good platform to be on for fans of other cloud storage services, like Dropbox and **Box**. Fortunately, the folks over at Microsoft are trying everything in their power to lure more users to the Mango platform, and for that reason, they have welcomed the official app for Box with open arms, despite it being a rival of their very own offering, SkyDrive. After taking the new official Box client for a spin, we have to say that the app bests the SkyDrive client for WP7 by quite a huge margin. Almost all the options that are available in the web version of Box are there in the WP7 app as well. You can upload files, view all the data stored in your Box, and manage everything related to files, folders, comments and collaborators.

~~Microsoft's Windows Phone OS is designed to be a hybrid of a mobile operating system and a desktop operating system, combining the best of both worlds. It's a platform that's designed to be used on a variety of devices, from smartphones to tablets to desktop computers. The OS is built on a foundation of Windows, which means it's familiar to many users. But it's also designed to be different, to offer a unique experience that's tailored to the mobile environment. One of the key features of Windows Phone is its focus on simplicity and ease of use. The interface is clean and intuitive, with large, clear icons and a simple navigation system. This makes it easy for users to find what they need and get it done. Another key feature is its integration with the Windows ecosystem. Windows Phone can sync up with your Windows PC, so you can access your files and apps from anywhere. It can also sync up with your Windows Live account, so you can access your photos, music, and other content from anywhere. This makes Windows Phone a great choice for users who want a mobile device that's easy to use and integrates seamlessly with their Windows ecosystem. And finally, Windows Phone is designed to be secure. It has built-in security features that help protect your data and your privacy. This makes it a great choice for users who want a mobile device that's not only easy to use but also secure.~~
