

The [official YouTube client](#) for iPhone and iPad has been around in the App Store for a week now, and even many pre-iOS 6 users have switched to it, thanks to the app's interface and features that give it a clear edge over the stock YouTube app in iOS 5. As good as the official app is, it is still far from perfect and can use a lot of improvements in many areas. That's where the new **Jasmine** app comes into the scene. Jasmine is a feature-rich YouTube client with a gorgeous interface. The app offers options like uninterrupted background audio playback for any video, resuming playback where you left off, playlist management and spam filtering. Apart from these bonus features, Jasmine has everything that is available in the official YouTube client for iOS.
