

**Dial** is a new Cydia tweak that offers a gesture-controlled shortcut to dialing numbers on your iPhone. If you are playing a game or watching a video, there is no need to quit it and go all the way to the Phone or Messages app to place a call. Simply perform the gesture used to invoke the App Switcher tray or Siri, and a compact dialer with a shortcut to messaging will pop up over the screen. Users can choose whether they want to replace Siri or the App Switcher with the dialer, or use it in conjunction with the stock options. Another option on offer is to replace the entire Spotlight search area with the dialer.
