

Windows 8 has allowed Microsoft to pursue new frontiers beyond its decades old Windows model. The hybrid new OS has opened fresh opportunities for its maker, both in the desktop and tablet industry. The number of new features, settings, UI elements and other tidbits that it comes with is incredibly impressive. Not only is Windows 8 fast, but the beautiful transition animations in its Start Screen and Modern UI apps are simply gorgeous. If you've already made your jump to Windows 8 and want to tweak it to make it even faster, try taking **EnhanceMy8** for a spin. The software hooks you up with some system maintenance tools such as Disk Cleaner, Disk Defragmenter, System Info and Registry Cleaner, along with several of other tweaking options in order to – as the name implies – enhance your Windows 8 experience.

A good interface of an application is a very worthy prospect and thankfully, EnhanceMy8 doesn't disappoint in this regard with its Ribbon UI. It's easy to navigate and you will find a multitude of options to play with. The main window comprises of six tabs at the top, each packing in additional buttons down the line. The tool opens in the Information tab when launched, which gives you a thorough review of your system's hardware and software information. For instance, you can check details on your processor's temperature (in both Fahrenheit and Celsius units), Windows 8 related OS information, Mainboard and Memory, SPD (memory timings and bus speed etc.), Display Adapter and so on.
