

“Siri, call me Chverinhala”

[Siri](#) is *the* feature, solely, for which a large number of [iPhone](#) (and even non-[iOS](#)) users are upgrading to

[iPhone 4S](#)

. Both

[Android](#)

and

[Windows Phone 7](#)

have voice commands, but no other system has the easygoing, conversational style that Siri possesses. Despite suffering a few server-side issues (that you can

[try to fix using our guide](#)

), the personal voice assistant is wonderful. To make it really personal, you can even make it call you by your real or chosen name. Pronouncing names, however, can be a bit tricky for a robotic voice stuck inside Alumino-silicate glass and stainless steel. Fortunately, you can make Siri call you exactly what you want using the simple little procedure described past the break.

~~Ok, I'll send your message. Be there in 30 minutes. To: Kate Egan. Be there in 30 minutes. Siri. (via tipb)~~
