

Back in February 2012, we reviewed a Google Chrome extension that lets you [download APK files of Android apps from Google Play](#) directly to your PC, to be able to manually sideload them to your device. This method helps you grab any app that you are otherwise having problems installing to your device due to regional restrictions. Though that extension required some tinkering after Chrome's latest updates, and stopped working for some altogether. Today, we're bringing you a Windows app called **Real APK Leecher** that provides a more convenient way to download Android applications to your PC by similarly using your Google account associated with your device.

To get started, you first need to find your Device ID. Simply enter `*##8255##` into your phone dialer, you'll be shown your device ID (as 'aid') in GTalk Service Monitor. As another option, you can also use an Android app called [Device ID](#) that quickly reveals the ID to you without any extra jargon.

Real APK Leecher v1.3.5 by Nhật Cường Devteam
