

Whenever I jailbreak an iPhone, **biteSMS** is among the first Cydia apps I download. It offers so much in terms of convenience that once you get used to biteSMS, it becomes nearly impossible to go back to the stock Messages app in iOS. Having said that, some other tweaks in the jailbreak store have recently starting coming up with decent

[alternatives to the features available in biteSMS](#)

. Fortunately, the team behind biteSMS isn't resting on its laurels, and are always looking to make the famous app even better than it already is. Quick Compose is the feature of biteSMS that has managed to attract most fans to the app, and with the app's latest update, it has become even better! In addition to a plethora of performance improvements and bug fixes, the beta version of biteSMS 7.6 also comes with a brand new Notification Center widget. This widget provides shortcuts that can be used to quickly get in touch with your favorite contacts.
